Movie Studio Launch Analysis

Meet the Team

- ❖ **Davies Kiyaka** – Data Wrangling
- ❖ **Peter Njenga** – EDA
- ❖ **Sonia Mshila** – Hypothesis Testing
- ❖ **Margaret Kuria** – Linear Regression
- ❖ **Victoria Jemutai** – Recommendations

Executive Summary

Top Talent Studios is entering the film industry with a **data-first approach**.

By analyzing trends across multiple datasets, we explored the key factors that influence **movie profitability**.

Using Python, we translated complex data into **clear, actionable insights** to guide smart and profitable decisions for the studio.

Business Problem

Top Talent Studios is an emerging creative studio entering the film industry with bold ambitions to compete with the major players. To turn their vision into reality, they are seeking a comprehensive understanding of the industry landscape. Their key focus is identifying the most profitable genres and determining the optimal production budget ranges to maximize returns and ensure long-term success.

Project Objectives

- Identify the movie genres that generate the highest profitability relative to production budgets.
- Determine which genres achieve the highest average audience ratings.
- Analyze current and emerging trends in movie genres, themes, and production styles.
- Identify top-performing writers, directors, and producers for potential collaboration based on proven success metrics.

Data Sources

- **Box Office Mojo:** Domestic and international gross per movie
- **Rotten Tomatoes:** Genre, critic scores, release dates
- **The Numbers:** Production budget and worldwide gross
- **TMDb:** Popularity metrics and user ratings

Data Preparation

- Removed currency symbols and commas from budget/gross fields
- Converted monetary fields to numeric values
- Filtered relevant columns like production budget and worldwide gross
- Dropped missing or duplicate records
- Merged datasets based on objectives e.g movie title and release date

Does Budget Predict Revenue?

- Built a statistical model:
 - X (independent): Production Budget
 - Y (dependent): Worldwide Gross Revenue
- Found a strong, statistically significant relationship.
- Each \$1M spent yields ~\$2.73M in gross revenue (on average)
- Budget explains 57% of performance
- Model is most reliable for mid- to lower-budget films

Revenue from movie genres

Movie genres and their ratings

Business Recommendations

- Focus on genres with proven profitability (e.g., Action, Thriller).
- Target a budget sweet spot (e.g., \$20–50 million range).
- Release films during high-grossing months (e.g., June, December).
- Use data models to forecast returns before greenlighting a project.
- Standardize runtimes (e.g., 100–120 mins) for market alignment.

Next Steps

- Expand dataset with international market trends.
- Build predictive models to forecast box office returns.
- Develop a studio strategy driven by data insights.
